CHARACTERISTICS	5
INSTALLATION	6
USE	9
MAINTENANCE	10

# RECOMMENDATIONS AND SUGGESTIONS

## INSTALLATION

- The manufacturer will not be held liable for any damages resulting from incorrect or improper installation.
- The minimum safety distance between the cooker top and the extractor hood is 650 mm.
- Check that the mains voltage corresponds to that indicated on the rating plate fixed to the inside of the hood.
- For Class I appliances, check that the domestic power supply guarantees adequate earthing.
- Connect the extractor to the exhaust flue through a pipe of minimum diameter 120 mm. The route of the flue must be as short as possible.
- Do not connect the extractor hood to exhaust ducts carrying combustion fumes (boilers, fireplaces, etc.).
- If the extractor is used in conjunction with non-electrical appliances (e.g. gas burning appliances), a sufficient degree of aeration must be guaranteed in the room in order to prevent the backflow of exhaust gas. The kitchen must have an opening communicating directly with the open air in order to guarantee the entry of clean air.

## USE

- The extractor hood has been designed exclusively for domestic use to eliminate kitchen smells.
- Never use the hood for purposes other than for which it has been designed.
- Never leave high naked flames under the hood when it is in operation.
- Adjust the flame intensity to direct it onto the bottom of the pan only, making sure that it does not engulf the sides.
- Deep fat fryers must be continuously monitored during use: overheated oil can burst into flames.
- The hood should not be used by children or persons not instructed in its correct use.

## MAINTENANCE

- Switch off or unplug the appliance from the mains supply before carrying out any maintenance work.
- Clean and/or replace the Filters after the specified time period.
- Clean the hood using a damp cloth and a neutral liquid detergent.

## Wall drilling and bracket fixing

### Wall marking:

- Draw a vertical line on the supporting wall up to the ceiling, or as high as practical, at the centre of the area in which the hood will be installed.
- Draw a horizontal line at 650 mm above the hob.
- Place bracket **7.2.1** on the wall as shown about 1-2 mm from the ceiling or upper limit aligning the centre (notch) with the vertical reference line.
- Mark the wall at the centres of the holes in the bracket.
- Place bracket **7.2.1** on the wall as shown at X mm below the first bracket (X = height of the upper chimney section supplied), aligning the centre (notch) with the vertical line.
- Mark the wall at the centres of the holes in the bracket.
- Mark a reference point as indicated at 116 mm from the vertical reference line and 320 mm above the horizontal reference line.
- Repeat this operation on the other side.
- Drill  $\varnothing$  8 mm holes at all the centre points marked.
- Insert the wall plugs **11** in the holes.
- Fix the lower bracket **7.2.1** using the **12a** screws (4,2 x 44,4) supplied.
- Fix the upper bracket **7.2.1** and the air outlet connection support **7.3** together using the 2 screws **12a** (4,2 x 44,4) supplied.
- Insert the two screws **12a** (4,2 x 44,4) supplied in the hood body fixing holes, leaving a gap of 5-6 mm between the wall and the head of the screw.

## Mounting the hood body

- Before attaching the hood body, tighten the two screws **Vr** located on the hood body mounting points.
- Hook the hood body onto the screws **12a**
- Fully tighten support screws **12a**
- Adjust screws **Vr** to level the hood body.

## Connections

### DUCTED VERSION AIR EXHAUST SYSTEM

When installing the ducted version, connect the hood to the chimney using either a flexible or rigid pipe  $\varnothing$  150 or 120 mm, the choice of which is left to the installer.

- To install a  $\varnothing$  120 mm air exhaust connection, insert the reducer flange **9** on the hood body outlet.
- Fix the pipe in position using sufficient pipe clamps (not supplied).
- Remove any activated charcoal filters.

### RECIRCULATION VERSION AIR OUTLET

- Put connection **15** into the connection support **7.3**.
- Insert the connection extension pieces laterally **14.1** in connection **15**.
- Make sure that the outlet of the extension pieces **14.1** is horizontally and vertically aligned with the chimney outlets.
- Connect the air outlet connection **15** to the hood body outlet using either a flexible or rigid pipe  $\varnothing$  150 mm, the choice of which is left to the installer.
- Ensure that the activated charcoal filters have been inserted.

## ELECTRICAL CONNECTION

- Connect the hood to the mains through a two-pole switch having a contact gap of at least 3 mm.
- Remove the grease filters and verify that the connector of the feeding cable is correctly inserted in the socket placed on the side of the fan. Enlever les filtres à graisse et s'assurer que le connecteur

## Flue assembly

### Upper exhaust flue

- Slightly widen the two sides of the upper flue and hook them behind the brackets **7.2.1**, making sure that they are well seated.
- Secure the sides to the brackets using the 4 screws **12c** (2,9 x 9,5) supplied.
- Make sure that the outlet of the extensions pieces is aligned with the chimney outlets.

### Lower exhaust flue

- Slightly widen the two sides of the flue and hook them between the upper flue and the wall, making sure that they are well seated.
- Fix the lower part laterally to the hood body using the 2 screws **12c** (2,9 x 9,5) supplied.

Control Panel

The hood can be switched on pushing directly onto the requested speed without firstly having to select 0/1 button.

KEY	LED		FUNCTIONS
L	0/1 Light		Turns lighting on and off.
T1	0/1 Motor	on	First speed. When pressed for about 1 seconds the motor is switched off.
T2	Speed	on	Second speed.
T3	Speed	on	Third speed.
T4	Speed	Fixed	Max. speed
		Flashing	Intensive speed. Suitable for the strongest cooking vapours and odours. The function becomes active when the button is pushed for about 2 seconds. After 10 minutes of functioning it turns off automatically. This function can be interrupted by means of pressing any of the buttons.
S1	Led	Fixed	Indicates that the Metal grease filters saturation alarm has been triggered, and the filters need to be washed. The alarm is triggered after 100 working hours. <i>(Reset; check the Maintenance-paragraph)</i>
		Flashing	indicates that the activated charcoal odour filter saturation alarm has been triggered, and the filter has to be replaced; the metal grease filters must also be washed. The activated charcoal odour filter is triggered after 200 working hours. <i>(Activation and Reset; check the Maintenance-paragraph)</i>

## Grease filters

---

### CLEANING METAL SELF- SUPPORTING GREASE FILTERS

#### Alarm signal reset

- Switch off the lights and extractor motor.
- Press button **T3** for at least 3 seconds, until the leds start to flash.

#### Cleaning the filters

- The filters must be cleaned every 2 months of operation, or more frequently for particularly heavy usage, and can be washed in a dishwasher.
- Remove the filters one at a time by pushing them towards the back of the group and pulling down at the same time.
- Wash the filters, taking care not to bend them. Allow them to dry before refitting.
- When refitting the filters, make sure that the handle is visible on the outside.

## Activated charcoal filter (Recirculation version)

---

### REPLACING THE ACTIVATED CHARCOAL FILTER

#### Alarm signal activation

- In Recirculation version Hoods, the Filter saturation alarm can be enabled on installation or at a later date. Turn the Lights and the suction Motor off.
- Disconnect the Hood using the Main switch or the double-pole switch on the mains power supply.
- Restore the connection by pressing and holding **T1**.
- Release the button. All five LEDs are turned on
- Within 3 seconds press **T1** until LEDs T1 and T4 flash in confirmation:  
LED flashes twice - Activated charcoal filter saturation alarm ENABLED  
LED flashes once - Activated charcoal filter saturation alarm DISABLED

- The filter is not washable and cannot be regenerated. It must be replaced when led **S1** flashes or at least every 4 months. The alarm signal will only light up when the extractor motor is switched on.

#### Alarm signal reset

- Switch off the lights and extractor motor.
- Press button **T3** for at least 3 seconds, until the leds start to flash.

#### Replacing the Filter

- Remove the metal grease filters
- Remove the saturated activated carbon filter by releasing the fixing hooks
- Fit the new filter by hooking it into its seating
- Replace the metal grease filters.

## Lighting

### LIGHT REPLACEMENT

#### 20 W halogen light.

- Remove the 2 Screws fixing the Lighting support, and pull it out of from the Hood.
- Extract the Lamp from the Support.
- Replace with another of the same type, making sure that the two pins are properly inserted in the lamp holder socket holes.
- Replace the Support, fixing it in place with the two Screws removed as above.

This appliance conforms to European Low Voltage Directive 73/23/CEE governing electrical safety, European Directive 89/336/CEE on Electromagnetic Compatibility and Directive 93/68/CEE regarding CE Marking.

Este aparato es conforme con la normativa europea sobre baja tensión C.E.E. 73/23 correspondiente a la seguridad eléctrica y a las normativas europeas : C.E.E. 89/336 sobre la compatibilidad electromagnética y C.E.E. 93/68 sobre la marca CE.

Dieses Gerät entspricht folgenden EG-Richtlinien: Niederspannungsrichtlinie EWG 73/23 hinsichtlich elektrischer Sicherheit, Richtlinie Elektromagnetische Verträglichkeit EWG 89/336 und Richtlinie EWG 93/68 hinsichtlich der CE-Kennzeichnung.

Este aparelho está em conformidade com a norma europeia acerca da baixa tensão C.E.E. 73/23, respeitante à segurança eléctrica e com as normas europeias: C.E.E. 89/336 respeitante à compatibilidade electromagnética e C.E.E. 93/68 respeitante à marcação CE.
